SUMMARY

I'm Abdullah, a Computer Science student and a Software Engineer with an interest in Machine Learning.

My path to software engineering was from a young age. During my middle school days, I was active on a social platform called "Discord" where I created multiple large-scale bots in several languages like JavaScript and Python.

This start has ignited a new passion for me to create more value-driven products, that instead delivering plain software, it serves both rich value and software to the end-user. After finishing middle school, I switched from building bots to building full-stack products'. I built a whole full-stack application called "ZkrApp" that posted Azkar on subscribed Twitter profiles and reached 1000 users in less than a month.

My purpose is that whatever project I'm working on, whether it was an individual or bussiness related, I aim to create value through making meaning in interactions, meetings, code, or any aspect of the software cycle.

EDUCATION

Computer Science

[Hadhramout University](#)

2020 - 2024

- Created the local college website used by students for lectures and notes.
- Mastered heavy computer science subjects including operating systems, algorithms design and analysis, and computer organization and architecture.

Re:Coded

[Frontend Web Bootcamp](#)

12/2022 - 05/2023

- Mastered key frontend technologies: HTML, CSS, JavaScript and React.
- Expanded my development workflow with: Git workflow and Agile Scrum.
- Developed a capstone project with: Next.js, Firebase.
- Applied professional industry tooling in capstone project: Unit Testing, CI/CD, Conventional Commits.

VOLUNTEERING

Coding Instructor

[Volunteers' Club](#)

2023

I trained technology enthusiast kids ranging from 10 to 14 years old to program in python. It was a pleasant experience to be able to give to the community, even if in small manner, and prepare the next software engineers in Yemen for success.

ZkrApp

2019 - 03/2020

Jeddah, Saudi Arabia

ZkrApp is a Twitter bot that tweets azkar automatically. (<https://github.com/iabady/zkrapp>)

- Gained 1000 users in less than a month
- Implemented backend functionality using TypeScript
- Implemented scrum agile methodology
